

# Payment via Back Office call

You can embed a payment script via SberPay without interacting with the payment page. This will allow your customers to pay for purchases in the browser via Sberbank Online after receiving a push or SMS notification. To connect, use the following instructions:

1	The client forms and confirms the order.
2	<p>The merchant registers an order using one of the following requests: for one-phase queries:</p> <ul style="list-style-type: none"><li>• <a href="#">request for order registration (WS interface);</a></li><li>• <a href="#">Request for order registration (REST interface);</a></li></ul> <p>for two step queries:</p> <ul style="list-style-type: none"><li>• <a href="#">request for order registration (WS interface);</a></li><li>• <a href="#">Request for order registration (REST interface).</a></li></ul> <p>In this case, the following parameters are passed in the request:</p> <ul style="list-style-type: none"><li>• back2app</li></ul>
3	The payment gateway returns a response.
4	The client receives a PUSH notification.
5	The client opens SBOL (or SMS with information from the bank) and confirms the payment.

<b>6</b>	The customer confirms the payment.
<b>7</b>	<p>If the payment was made according to a two-phase scheme, the merchant sends a request to complete the order to the payment gateway:</p> <ul style="list-style-type: none"> <li>• <a href="#">WS interface</a>;</li> <li>• <a href="#">REST interface</a>;</li> </ul>
<b>8</b>	The payment gateway returns a response to the completion request.
<b>9</b>	<p>To get the order status, the merchant sends an order status request to the payment gateway:</p> <ul style="list-style-type: none"> <li>• <a href="#">WS interface</a>;</li> <li>• <a href="#">REST interface</a>;</li> </ul>
<b>10</b>	The payment gateway returns a response to the order status request.

Refund and reversal requests are standard payment gateway requests.
