

Compliance with law 54-FZ

Dear clients of Sberbank's Internet acquiring!

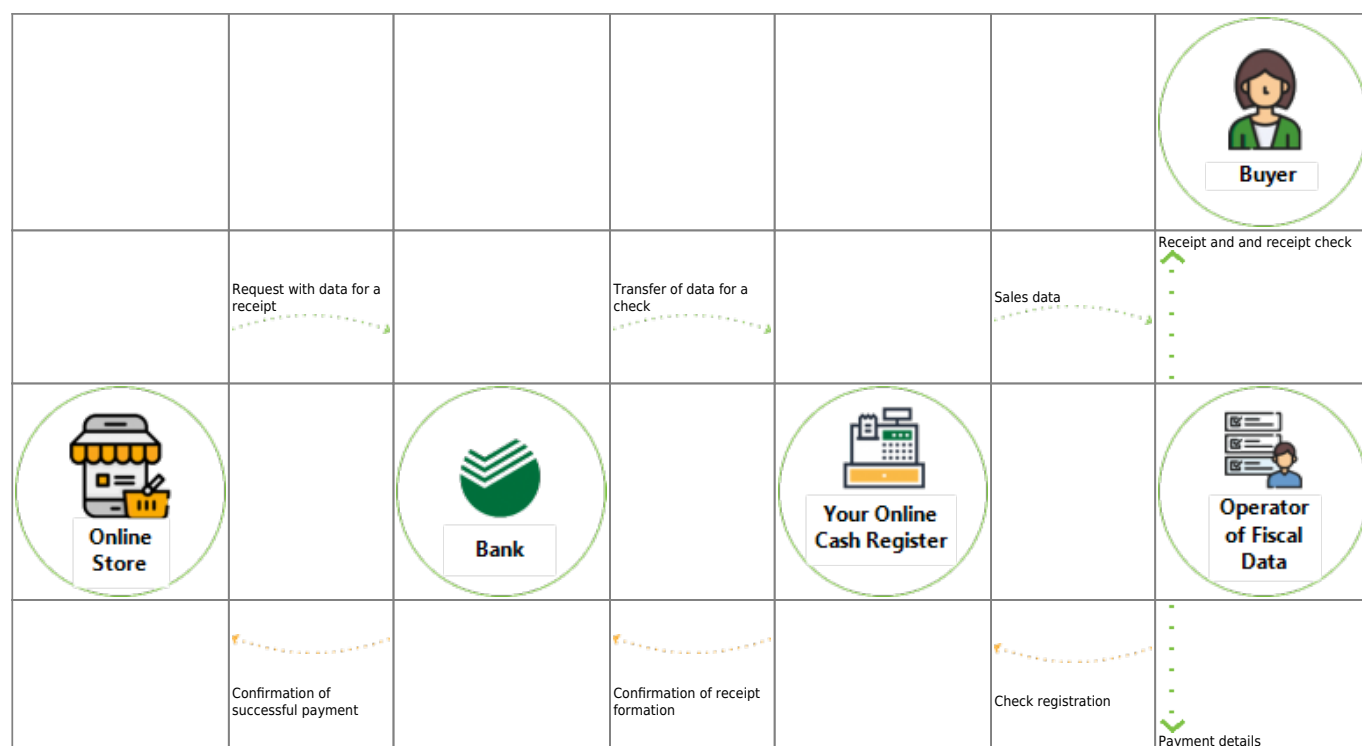

For online stores, Sberbank has developed a comprehensive solution to ensure compliance with 54-FZ. On July 1, 2017, the requirements under the new edition of 54-FZ on the mandatory use of online cash registers for online stores came into force.

Amendments to the law oblige online stores to use special cash registers to send fiscal data to the Federal Tax Service (FTS).

Sberbank offers the following solutions for online trading:

- «Digital Cash Register» from Evotor – advanced solutions in the field of online fiscalization for Sberbank acquiring clients;
- ATOL is a cloud service that allows you to rent cash registers for the purposes of compliance with Law 54-FZ, thus ensuring creation of fiscal documents at the time of settlement and their sending to the OFD;
- Biznes.Ru – a service for fiscalization through online cash registers owned by a merchant;
- Soft Center for EVOTOR is an application that allows you to fiscalize payments coming through Sberbank Internet acquiring.
- Initpro kassa – a cloud-based fiscalization service for online stores;
- OFD.ru is a fiscal data operator (cloud-based fiscalization service);
- KOMTET Kassa - Online cash desk compliant with 54-FZ for SberBank Internet acquiring.

On the part of «Sberbank» a technical possibility has been developed for the transfer of information about the goods basket to the Federal Tax Service from the side of the online store. Below is a diagram of work with fiscalization.

Version of the fiscal document format

Some specific request parameters of the programming interface (API) are supported depending on the version of the fiscal document format (FFD) used. Until recently, version 1.0 was used, currently version 1.05 is used. In requests where the set of used parameters has changed due to the change in FFD version, it is clearly indicated with which version this or that parameter is compatible. If it is not explicitly specified, the transfer of parameters is supported by all FFD versions/

You can change the FFD version in [personal account settings](#).
